

DATA MANAGEMENT SYSTEMS

The USI Assessment Committee has been working on a study of Data Management Systems that could facilitate a more efficient and comprehensive assessment process at USI. With the pending implementation of the Revised Core Curriculum which is guided by an assessment perspective, this is an opportune time for faculty to have some input into the system that will help manage the data and analysis necessary.

Several vendors have provided presentations for the campus community. Below are links to those presentations. The Assessment Committee will be seeking faculty input on these systems in preparation for the USI Budget Hearing process beginning in March.
