Answers to Questions submitted for the GWEP Healthcare Consultant

- 1) In the general description of the work, there is a reference to "support the documentation of two models employed in the USI GWEP". By "support the documentation", is the expectation that the consultant will be expected to set up a database using the software GLUU such that interventions and/or impact can be measured?

The primary purposes of the documentation are to support field-based communications about the work and support initiative advancement by rooting it in existing or adapted theoretical frameworks. We believe the initiative is still at very formative stages but are interested in alignments that will strengthen efforts and facilitate impact evaluation in the future. Gluu is a resource that we have available to potentially support the documentation process and adaptation over time. There is no requirement that the consultant utilize Gluu as part of the documentation process or set it up for use post-contract. We are, however, interested in the consultant helping us explore how we might best utilize Gluu in service of the initiative moving forward.

- 2) Is it expected that the consultant will have existing familiarity with GLUU?

No. We would hope to see scopes of work that allow for some learning time and exploration of the Gluu platform to discover utilities.
